## PROFESSIONAL SUMMARY

MIS and Data Analytics professional with hands-on experience building automation-driven business solutions, web applications, data pipelines, and Power BI dashboards. I currently work as an MIS Executive at TLP Rail Manufacturer Pvt. Ltd., where I design and deploy web-based applications, automate everyday operational workflows, and build dashboards that help the leadership team and department heads make decisions. My day-to-day work involves Google Apps Script, JavaScript, Power BI, DAX, SQL, and Generative AI tools to solve real business problems. I am also continuously learning and keeping up with new developments in Generative AI and automation, which I treat as an ongoing part of how I work. I am looking for roles in automation, workflow, and data/business analytics where I can keep applying these skills.

## CORE SKILLS

**Automation & AI:** Workflow Automation, Process Automation, Generative AI, Prompt Engineering, AI-Assisted Development, Connectors & Integrations, Vibe Coding

**Data & Business Intelligence:** Power BI, Power Query, DAX, Advanced Excel, Google Sheets, SQL, MySQL, Data Cleaning & Transformation, Data Modelling, ETL, KPI Analytics, Sales / Purchase / Inventory Analytics

**Development & Integration:** Google Apps Script, JavaScript, HTML, CSS, Python, Google Forms, Google Workspace automation (Gmail, Sheets, Drive)

**Tools:** ChatGPT, Google Gemini, Claude, Perplexity, NotebookLM, n8n, Lovable, WhisperFlow

## PROFESSIONAL EXPERIENCE

### MIS Executive, TLP Rail Manufacturer Pvt. Ltd.

Apr 2025 – Present

- Designed and deployed 5+ web-based business applications (Google Apps Script, JavaScript, HTML, CSS, Sheets, Forms), now used by 20–30 people across departments.
- Automated the procurement cycle across indent, purchase order, vendor, and receiving stages, cutting manual follow-ups and communication by roughly 40%.
- Built a central task-management system: managers and HODs assign tasks with an owner and due date, employees submit completed work in the same app, and automated reminders chase pending items while skipping holidays and non-working days.
- Replaced a 10–12 day manual data-preparation cycle with automated cleansing routines using fuzzy logic and suspect-matching pools; pasted raw data is now cleaned and mapped within minutes, cutting cleansing effort by about 45% at 89–93% matching accuracy.
- Built a centralized relational data model linking order, purchase, sales, and invoice stages as a single source of truth for reporting and traceability.
- Developed 5+ Power BI dashboards (Power Query, DAX, data modelling, slicers) covering MoM / YoY trends, waterfall and Pareto analysis, decomposition trees, and customer dormancy.
- Created DAX-based customer analysis flagging active, slipping, at-risk, and lost customers — used by the Board, CEO, and Sales / Procurement heads for retention and revenue decisions.
- Applied Generative AI across application architecture, code generation, debugging, and deployment; integrated Gmail, Drive, and Sheets via Apps Script to move data across workflows.

### Back Office Executive, Kids Lovedale School

2023 – 2025

- Maintained student and administrative records in the school MIS and produced staff reports using Excel and Power BI.
- Helped build and maintain the school website (HTML, CSS).

### Data Analyst, Big Bull Trader Pvt. Ltd.

2023 – 2023

- Managed MIS data in Excel and built Power BI dashboards to track sales trends.
- Produced presentation and marketing materials aligned with company branding.

### Back Office Executive, Rohit Enterprise

2020 – 2022

- Handled business correspondence and maintained construction inventory records for accuracy and compliance.
- Prepared MIS reports for senior management and kept databases current.

PROJECTS & HANDS-ON PRACTICE

---

- **Business Application Development with Generative AI:** Used Generative AI tools to accelerate design, coding, debugging, and deployment of internal business applications.
- **Workflow & Connector Integration:** Connected automated workflows with Gmail, Google Drive, and Google Sheets to pull structured data and move it between business processes.
- **n8n Workflow Automation (Experimental):** Prototyped event-driven automation, including a customer-complaint workflow that reads incoming messages and drafts suitable responses.
- **Sales & Business Performance Dashboard (Power BI):** Combined sales and purchase data into one interactive dashboard with KPIs, waterfall and Pareto analysis, decomposition trees, and DAX-based customer classification.

CERTIFICATIONS & TRAINING

---

- Generative AI Engineering Mastermind — Outskill (2026)
- AI Bootcamp Workshop — Outskill (2026)
- Mastering Modern AI — Confederation of Indian Industry, CII (2025)
- Business Mastery Program — Business Coaching India, BCI, via TLP Rail Manufacturer Pvt. Ltd. (2025)
- **Additional training & certifications:** Power BI, Python, Web Designing, Database Management System (DBMS), SolidWorks, Information Technology Application.
